NLP Lab Report

Morphological Influence of Words Abstractness

University of Haifa

August 12, 2018

Contents

1 English

Because our goal in this project was to measure the morphological structure influence on the abstractness level of words.

we are to show that the morphological richness of hebrew allows to deduce clues about the abstractness of a word, by comparing analysis result in English and Hebrew.

Hence in this part of the project,our main objective is to redo the experiment done by Ela and her team, to get a baseline result of abstracness analysis in less morphologically rich language than hebrew, that we hope to excess in our hebrew experiment.
